Intercom Stations

The American Access Systems exterior, post mount **Intercom** stations will interface with almost any brand of interior, master station available on the market today. This outside intercom is available as a stand alone unit, when no keypad or card reader is needed. Each **Intercom** station is constructed using a heavy duty, powder coated metal enclosure with stainless steel faceplate, providing years of trouble free use. An 8 ohm mylar speaker and weather resistant call button are also included in each unit.

AAS is also proud to make available the **AiPhone** line of interior master stations. These high quality units will interface directly to any intercom station that AAS manufactures. All **AiPhone** models can be mounted directly to the wall or as a desk cabinet station. Each inside station also includes a release button to activate the relay and open the gate to allow access. *All **AiPhone** equipment is for interior use only!*

With a range of over 1500 feet and the ability to wire up to twenty interior stations to one system, the AAS **Intercom** is the perfect solution for almost any intercom need.
